Introduction

Thanks to our Underfloor distributor system electrical power is now available everywhere without complicated temporary installations! As with all products, we give much importance to high-quality components and workmanship. We use for example only hard rubber distributor boxes with excellent technical characteristics.

Whether installed in- or outdoor, we provide customised solutions that will not disappoint you!

Benefits of our system

- electrical power is available anytime and just in seconds
- no power cable lying around, therefore no more stumbling
- temporary installations are no longer needed
- easy and quick closing after use
- automatic opening thanks to gas spring
- high security for operators, vehicles, pedestrians
- protection against vandalism thanks to lockable cover
- almost invisible when not in use
- maintenance-free and therefore no operating costs
- optional lid heating allows the opening even under severe winter conditions

Underfloor distributor systems can also provide the following connections:

- power
- water
- compressed air
- video, Audio
- telematics

Our services

- individual consultation
- proven product range
- tailor-made, customised solutions
- manufacturing from small to large quantities
- lifetime availability of spare parts
- technical drawing (if required in 3D)
- competent advice on installation

We use only high quality hard rubber distributor boxes and well proven components. This allows an impeccable, maintenance-free use for many years.

Bern Federal court, Type PIAZZETTA

How do I make my selection?

The following questions are essential for the selection of the proper Underfloor distributor system:

1. What power connections are required?

Based on the number and Type of sockets and its protection, the size of the rubber distributor box is chosen. The rubber distributor is mounted in the lid of the underfloor power distributor. Contact us for more detailed information and clarifications.

2. Where is the underfloor power distributor system installed?

Information on indoor or outdoor installation and Type of use is helpful for the optimal design of the device.

3. Should the underfloor power distributor withstand vehicle traffic?

Each underfloor power distributor is designed for the specific needs. A system which needs to withstand vehicle traffic demands stronger construction as well as better foundation.

The CAMPETTO family can be used up to 25 t. If it should be demanded that trucks up to 40 t can drive on the unit PIAZZA must be chosen.

4. Shall it be possible to close the lid with plugged-in devices?

Certain mounting depth is required if you want to use the underfloor distributor system with plugged in devices. This mounting depth is not always available e.g. if mounted on top of garage roofs.

detail cable outlet

5. Shall the lid be filled?

To be fitted in perfectly to its environment, a fillable lid is needed. There are almost no limits to the kind of filling (cobblestones, wood, asphalt). The gas springs of the opening and closing mechanism are chosen for the individual lid weight.

6. Is drainage ensured?

In order to protect the underfloor distributor systems from water damage, it is necessary to ensure drainage.

Building of underfloor system GIFAS

For a complete underfloor distribution, you need three components:

1. Underfloor box

2. Hard rubber power distributor boxes

The hard rubber power distributor boxes which are used in our underfloor distributor systems have following features:

Type 7800 e.g., or...

...Type 7400, or...

... Type 1616

- high impact resilience
- temperature resistance (–45°C to +80°C)
- high resistance to chemicals
- resistance to aging
- electrical strength of 26'000 V at a housing thickness of 10 mm

3. Junction boxes

Each underfloor distributor system is supplied ready for installation, only power supply cable must be connected to the junction box.

Group	EN124	User zone	Test force	Load*	Wheel load
Group 1	A15	 Pedestrians / cyclists	15 kN	1.0t	0.6t
Group 2	B125	 Pedestrian areas / car parking areas	125 kN	8.3t	5.0t
Group 3	C250	 Roadside gutters	250 kN	16.6t	6.5t
Group 4	D400	 Roadways	400 kN	26.6t	11.0t
Group 5	E600	 Areas with a high wheel load such as port facilities, aircraft operation areas	600 kN	40.0t	16.0t
Group 6	F900	 Areas with a high wheel load such as aircraft operation areas	900 kN	60.0t	24.0t

* The load corresponds to 2/3 of the test force. A standardised slight deformation may occur at this load depending on the clear width of the cover.

*1 These models include a cable exit flap for the outlet of access lines in closed state.
Thus these models can be driven or walked over even in plugged mode.

PIAZZA 1000

Solid stainless steel construction approx. 1'000×1'000mm, load capacity up to 400kN, gas spring for easier opening, can be filled up with any material, custom-designed distributor boxes.

Filling up of the lid: The lid with a depth of 70mm can be filled up with any material required to match the surrounding area.

Cover lock: The lock is fitted underneath the cable exit flap.

Heating: A self-regulating heating strip is positioned in the pit cover to ensure simple opening even in frost.

Cable-exit: 150×125mm is integrated in the cover (flap opening 180×140mm).

The customer has to provide a substructure conforming to standards, the correct assembly of the pit (load capacity 400 kN) and the relevant drainage.

VESUVIO

Solid steel construction with round cover $\varnothing = 610\text{mm}$ and absorbing polyethylene insert, up to 400kN load capacity, gas springs for easier opening, modified cast-metal cover, distributor boxes according to customer requirements.

Cover lock: Is provided via an integrated spring bar lock.

Cover surface: Is a cast-metal surface and can not be filled up.

Connection cross-section: Maximum connection line $5 \times 16\text{mm}^2$ from connection socket to distributor box.

Cable-exit: Is integrated into the cast-metal frame $96 \times 64\text{mm}$

The customer has to provide a substructure conforming to standards and a correct assembly of the pit (load capacity 400 kN and the relevant drainage).

Cable outlet	Cable up to Ø25 mm
Gas spring supports	No
GIFAS scope of delivery	The stainless steel construction with shaft cover made of chequered plate V2A will be delivered ready for connection
Performances to be done by customer (on site/ on construction site)	<ul style="list-style-type: none">– Substructure of PICCOLINO has to be made along to standards– Proper assembly of the shaft (load 250 kN)– The pit cover is not sealed against surface water, which means that sufficient drainage of the pit must be provided by the customer

The CAMPETTO product range is modular and can therefore be combined as required. The basic components are the core of every CAMPETTO. These consist of the "metal box", i.e. the CAMPETTO incl. cover and frame, the GIFAS power distribution box and the junction box which are mounted on a mounting plate.

After the basic components have been selected, the options are chosen depending on the customer's specifications or the project requirements: i.e. with or without a fillable lid, the adapter plates for the incoming feeding lines, with or without frame heating, and whether the cover is filled or equipped with a chequered plate insert. The individual CAMPETTO is ready for delivery once all these components have been assembled.

The available accessories can also be ordered and mounted after delivery: a step protection plate for additional safety; coupling brackets for plug-gable connections; mounting brackets for the cable flap and the cable protection are available separately.

The aim of the CAMPETTO series is maximum adaptability, perfect coverage of as many applications in the C250 range as possible, as well as easy availability and short delivery times for each selection.

If you have opted for a CAMPETTO, proceed as follows:

1. Definition of the feeding lines, i.e. where the feedings (electricity, water, etc.) come from and the cross-sections; also if the CAMPETTO shall be equipped with a closed bottom part with drainage connection.
2. Definition of the cover type, i.e. with a fillable lid or a chequered plate insert.
3. Selection of the accessories:
 - Step protection plate
 - Mounting brackets for coupling connections
 - Mounting bracket for the cable flap
 - Cable protection (with or without bracket)
4. All accessories can be ordered and fitted after the installation of the CAMPETTO.

Please contact us regarding project specific dimensions and equipment requirements!

Base components

- 1) CAMPETTO with cover/frame
- 2) Power distribution box (on mounting plate)
- 3) Junction box (on mounting plate)

Optional components

- 4) Bottom part incl. drainage connection
- 5) Adapter plates for feeding lines
- 6) Heating cable/frame heating set
- 7) Chequered plate insert for cover
- 8) Water connection, 3/4", stainless steel

Accessories

- 9) Step protection plate
- 10) CEE63/5 or CEE125/5 coupling bracket
- 11) Mounting bracket for cable flap / cable protection
- 12) Cable protection

PIAZZETTA

- The PIAZZETTA can be individually fitted on both sides with hard rubber distributor boxes.
- The excavation system with gas springs, guided on slide bearings with A2 steel shafts, permits automatic extension at any time.
- Adjustable step protection plates provide protection against false steps and dirt deposits in the pit when open.
- The connection socket is modified for the connection values and should be placed on a prepared support.
- Standard concrete tube can be used.
- Top frame and pit cover for special GIFAS construction.

Item no.	Designation
012986	PIAZZETTA Lifting device V2A, two-sided for 2×7300/7700
023595	PIAZZETTA Lifting device V2A, one-sided for 7400/7700
079288	PIAZZETTA Lifting device V2A, two-sided for 2×7800/7900
018379	PIAZZETTA Lifting device V2A, one-sided for 7800/7900

Accessories/spare parts	
060122	Top frame/reservoir cover V2A for Type 600, B125 (12.5t)
014205	Top frame/reservoir cover V2A for Type 600, C250 (25t)
014311	Connection set 3020 for Underfloor distributor with clamp web 5×35 mm ² , 2×cable glands M40
014313	Connection set 3800 for Underfloor distributor with clamp web 5×70 mm ² , 2×cable glands M50
016146	Cover heating approx. 80 W with thermostat 5° C (–20 to +30°)
✓ 013772	Square key 12 mm for lifting appliance
027352	Locking mechanism (down and in place condition)

✓ From stock, offer subject to prior sale

Max. load capacity	B125 / 12.5t (125 kN) or C250 / 25t (250 kN)
Installation depth	min. 1'000 mm
Lid	individually fillable
Dimension cover	individually
Operating mode / cover	open, with step protection plate
Cover heating	on request
Quality	stainless steel V2A
Housing	open at the bottom
Hard rubber distributor (max.)	max. 2× Type 7800 / 7900
Built-in connector (max.)	5×35 mm ²
Cable outlet	H = 1'000 mm, NW 600 mm
Gas spring	No
GIFAS components included	Yes
GIFAS scope of delivery	The entire lifting device, including distributor box, pit cover which can be filled up and connection socket (fully fitted onto the additional frame) is supplied by GIFAS. The top frame is also included.
Performances to be done by customer (on site / on construction site)	<ul style="list-style-type: none"> – The concrete tube needs to be provided by the customer – The pit cover is not sealed against surface water, which means that sufficient drainage of the pit should be provided by the customer – Excavation work – Correct assembly of the construction (GIFAS components included) conforming to standards must be carried out by the customer. This also applies to filling up the reservoir

MOBILE

A concrete tube with a diameter of 60cm is fitted by the customer. The pit top element supplied by Gifas is placed into the concrete tube in an base edge position. The pit cover and the supports are supplied with the distributor box to fit the pit top part. The pit cover is prepared for filling up as required with paving stones (H = 90mm). The customer is required to install a mains cable through into the concrete tube. If a flexible cable is laid, the coupling can be assembled directly. A junction box should be used for installation with rigid cables or if the power is fed off in a loop.

Before an event the pit cover needs to be removed, the plug connected to the coupling in the pit from the distributor box and the distributor box positioned in the pit top element.

Item no.	Designation
023556	MOBILE Top stands V2A, can be fitted on one side with Type 7700, height 900 mm
023361	MOBILE Top stands V2A, can be fitted on both sides with Type 7700, height 900 mm
023352	MOBILE Pit frame V2A, for tube Ø60 mm, inner dimensions: 488×488×70 mm, load capacity B125
023353	MOBILE Pit frame V2A, for tube Ø60 mm, inner dimensions: 488×488×70 mm, load capacity C250
023356	MOBILE Pit cover V2A, can be filled up, consistent with Item no. 023352, outer dimensions: 488×488×70 mm, load capacity B125
023358	MOBILE Pit cover V2A, can be filled up, consistent with Item no. 023353, outer dimensions: 488×488×70 mm, load capacity C250

Accessories/spare parts	
011480	Connection set 2516 for distributor system with clamp web 5×10 mm ² , 2×cable glands M32, CEE 63/5 coupling
033230	Connection set 3020 for distributor system with clamp web 5×35 mm ² , 3×cable glands M40, CEE 63/5 coupling
✓ 020402	A2 fitting for CEE 63/5 coupling
011695	Lid lifter

✓ From stock, offer subject to prior sale

Max. load capacity	B125 / 12.5 t (125 kN) or C250 / 25 t (250 kN)
Installation depth	min. 400 mm
Lid	individually
Dimension cover	individually
Operating mode / cover	distributor placed on top
Cover heating	–
Quality	stainless steel V2A
Housing	–
Hard rubber distributor (max.)	2×Type 7700 or max. 2×Type 7900
Built-in connector (max.)	5×35 mm ²
Cable outlet	individually
Gas spring	No
GIFAS scope of delivery	<p>The MOBILE is supplied ready for connection with fitted GIFAS hard rubber distributor box, according to your measurements and component requirements.</p> <p>If required we supply the pit top section and top frame incl. cover to fit base plate, zinc-plated or rust-free ST 37. There is also a connection set with connection socket available, or a connection cable and coupling.</p>
Performances to be done by customer (on site / on construction site)	<ul style="list-style-type: none"> – The pit cover is not sealed against surface water; drainage of the pit should be provided by the customer – Excavation work – The correct assembly of the pit cover conforming to standards must be carried out by the customer – The connection socket is also required to be fitted in the pit by the customer

ROTRANT

GIFAS underfloor pit for limited space

- Additional security by «lid system», thus no obstacle through the lid state in open mode
- Simple installation by drilling one hole
- Robust steel construction with dimensions:
L×Ø = 420×271 mm, load capacity up to 30 kN
- Cover: cover made from V2A stud plate with turning bolt lock and cable exit flap
- Casing material: steel tube ST37 coated against corrosion
- Weight: approx. 19 kg

Item no.	Designation
081098	ROTRANT Underfloor distributor complete incl. solid rubber enclosure Type 1212 black; 1×CEE 3/16A 230V IP 67, 1×cable glands M25
✓ 141658	ROTRANT Underfloor distributor empty

Max. load capacity	3t (30 kN)
Installation depth	min. 420 mm
Lid	chequered plate V2A
Dimensions cover	Ø271 mm
Operating mode / cover	closed*
Cover heating	–
Quality	stainless steel V2A
Housing	open at the bottom
Hard rubber distributor (max.)	Type 1212
Built-in connector (max.)	–
Cable outlet	L×D = 420×271 mm
Cable	Yes
Gas spring	No
GIFAS scope of delivery	The stainless steel construction with pit cover from chequered plate V2A will be assembled and ready for connection.
Performances to be done by customer (on site/on construction site)	<ul style="list-style-type: none">– Substructure of ROTRANT has to be made along to standards– Proper assembly of the shaft (load 125 kN)– The pit cover is not sealed against surface water, which means that sufficient drainage of the pit must be provided by the customer

* These models include a cable exit flap for the outlet of access lines in closed state.
Thus these models can be driven or walked over even in plugged mode.
✓ From stock, offer subject to prior sale

RETRANT

GIFAS underfloor pit for limited space

- High security by GIFAS «double pressure execution»- cover is held securely closed without lock
- Robust steel construction with dimensions:
L×W×D = 380×280×420 mm, load capacity up to 30 kN
- Cover: cover made from V2A stud plate with turning bolt lock and cable exit flap
- Weight: approx. 19 kg

Item no.	Designation
101647	RETRANT Underfloor distributor complete incl. solid rubber enclosure Type 2516 black; 1×CEE 3×16A/230V IP 67 1×CEE 5×16A/400V IP 67, 1×cable gland M25
✓ 039447	RETRANT Underfloor distributor empty

Max. load capacity	3 t (30 kN)
Installation depth	min. 420 mm
Lid	chequered plate V2A
Dimensions cover	380×280 mm
Operating mode / cover	closed*1
Cover heating	–
Quality	stainless steel V2A
Housing	closed at the bottom
Hard rubber distributor (max.)	Type 2516
Built-in connector (max.)	–
Cable outlet	L×B×T = 380×280×420 mm
Cable outlet	Yes
Gas spring	Yes
GIFAS scope of delivery	The stainless steel construction with pit cover from chequered plate V2A will be assembled and ready for connection.
Performances to be done by customer (on site / on construction site)	<ul style="list-style-type: none"> – Substructure of RETRANT has to be made along to standards – Proper assembly of the shaft (load 30 kN) – The pit cover is not sealed against surface water, which means that sufficient drainage of the pit must be provided by the customer

*1 These models include a cable exit flap for the outlet of access lines in closed state. Thus these models can be driven or walked over even in plugged mode.
